GUNDERSEN
ST. JOSEPH'S
HOSPITAL AND CLINICS

EXECUTIVE SUMMARY OF 2019-2021

The following executive summary refers to the 2019-2021 community health needs assessment implementation plan by Gundersen St. Joseph's.

KEY ISSUE | ADDICTION AND SUBSTANCE ABUSE

- Opioid reduction program.
- Expansion of other pain-relieving modalities.

Tobacco Cessation Program

All patients of Gundersen St. Joseph's are asked if they smoke, vape or use tobacco products. If they do, they are offered tobacco cessation assistance. This occurs at every primary care visit with the intent that it keeps the issue top of mind for the patient.

St. Joseph's has also provided many interactive presentations to local school districts to educate on the dangers of vaping and tobacco use. These programs were put on hold during the COVID-19 pandemic but have begun once again in late 2021 with a specific focus on the behavioral side of addiction.

Opioid Reduction Program

Due to the opioid crisis, Gundersen Health System has focused on reducing the number of opioid prescriptions while increasing access to and promotion of other pain relief modalities.

The following charts show the number of opioid pills per prescription and the number of prescriptions per 1,000 patients.

Expansion of other pain relief modalities

Access to medical acupuncture was expanded during 2019-2021 and the number of patients seen also increased.

In late 2021, Gundersen St. Joseph's introduced new pain clinic services with Dr. Joseph Binengar.

Opioid pills per prescription. Oct. 2017 - Dec. 2021

Opioid prescriptions per 1,000 patients. Nov. 2017 - Dec. 2021

EXECUTIVE SUMMARY OF 2019-2021

KEY ISSUE | BEHAVIORAL HEALTH

- ACEs and TIC
- School based mental health services

ACES & TIC

During 2019, staff had training on Adverse Childhood Experiences (ACEs) and Trauma Informed Care (TIC) and the system began the work of weaving this approach into our everyday practices.

The COVID-19 pandemic reduced the opportunities to formally integrate ACEs and TIC into our work. However, the initial education and awareness of ACEs and TIC helped guide some of our response to the pandemic. We were experiencing an Adverse Childhood Event first hand. Schools closed, social-distancing measures and masking were implemented and many children had to learn remotely. For some children in abusive homes, going to school was their safe harbor.

All these things combined, the potential impact on the mental health of our youth population became an area of concern and strengthened our commitment to our school-based mental health program.

School-based behavioral health program

In our previous community health needs assessment we discussed the development of our school-based behavioral health program. This program uses a Qualified Treatment Trainee (QTT) to provide free behavioral health services at three local schools. This allows the children to receive timely behavioral health care without the need for them to take time away from school or the parent or guardian to take time away from work.

In 2019, Gundersen St. Joseph's hired Alyssa Sherwood, MSW, QTT, to provide these services as she worked towards her 3,000 hours of supervised patient care time.

The program has continued to grow and has shown great results for both the school systems and the students. This innovative program was awarded Wisconsin Hospital Association Foundation's "2020 Global Vision Community Partnership Award" and has [received statewide media coverage](#).

Gundersen St. Joseph's also shared the details of this program at the 2021 National Rural Health Conference to encourage other healthcare entities to copy the model and help improve behavioral health care access to their youth population.

For more information on the program, click the video above.

EXECUTIVE SUMMARY OF 2019-2021

■ KEY ISSUE | ACCESS AND COST OF HEALTHCARE

- Introduction of more outreach services.
- A focus on increasing health literacy.
- Continuation of health fairs program.

Health Fairs and Cooking Classes

During 2019, Gundersen St. Joseph's continued to hold quarterly health fairs as well as a handful of cooking classes supported through a grant from the Walmart Foundation.

All classes and health fairs were canceled in March of 2020 due to the COVID-19 pandemic. Gundersen St. Joseph's was able to bring back adult fitness in its new facility. Gundersen St. Joseph's is anxiously awaiting the approval to begin community programming once again.

Emergency & Urgent Care Expansion

In late 2020, Gundersen St. Joseph's expanded urgent care hours to 8 a.m. - 8 p.m. on weekends and holidays to improve access to affordable care.

New "shared care" midwife program

Gundersen St. Joseph's expanded care options for expectant mothers through the introduction of a "shared care" midwife program. This allows pregnant patients to have their prenatal care appointments at Gundersen St. Joseph's rather than travel to another Gundersen Clinic in Tomah. Such appointments are relatively quick check-ins with lab specimens required, both of which can now be done locally without the need for the mother to travel further.

Expanded specialty care

Gundersen St. Joseph's also expanded access to ENT, gynecology and pain clinic.

New facility

In June 2020, Gundersen St. Joseph's opened its new \$33.1 million hospital and clinic facility. The new facility benefits from many upgrades over the former building including improved patient flow, a more efficient use of space, improved HVAC, accessibility and more.

GSTJ PODCAST

As a response to the pandemic, Gundersen St. Joseph's developed the GSTJ PODCAST - a community health podcast designed to share information with the community on various health topics.

The goal of the podcast is to build a platform that would help to improve the health literacy of the community. Previous topics have included navigating emergency care, power of attorney for health, financial assistance, COVID-19 vaccines and more. The podcast uses Gundersen St. Joseph's staff and providers to help educate the community.

The podcast is available on [Facebook](#), [Spotify](#), [Apple Podcasts](#), and many other podcast platforms.

COMMUNITY HEALTH NEEDS ASSESSMENT 2021-2025

INTRODUCTION

The Patient Protection and Affordable Care Act (2010) requires tax-exempt 501(c)(3) healthcare organizations to perform a Community Health Needs Assessment every three years and to adopt an implementation strategy to meet the identified community health needs.

DATA SOURCES

Gundersen St. Joseph's Hospital and Clinics is an affiliate of the larger Gundersen Health System and was a participant in the collaborative community health needs assessment titled Compass Now 2021.

Data for the Gundersen St. Joseph's Community Health Needs Assessment was obtained through a partnership with the Great Rivers United Way-Compass Now 2021 coalition. Compass Now 2021 was a joint effort of the Great Rivers United Way area healthcare organizations and county health departments to assess the needs of the community, to identify resources, and to address the most urgent needs.

Compass Now 2021 is currently available for review from the Great Rivers United Way website <https://greatriversunitedway.org/our-work/community-needs-assessment>

OTHER DATA SOURCES

2021 Juneau County Community Health Needs assessment also. The report is available here: <https://www.co.juneau.wi.gov/health-assessment.html>

County Health Rankings and Roadmaps. www.countyhealthrankings.org

APPROACH

Gundersen St. Joseph’s Hospital and Clinics has a unique geographic location. Its service area is on the edge of the region identified in the Compass Now 2021 report and crosses into Juneau County. Although our service area faces similar issues to those faced throughout the Great Rivers region, it is important to give priority to those issues highlighted close to home whilst keeping our eye on those highlighted by the greater region.

SOCIAL DETERMINANTS

Over the years, Gundersen St. Joseph’s has increased its understanding of the social determinants of population health. In 2021, the COMPASS NOW 2021 coalition chose to align their research even closer to this model in order to provide a clearer picture of the state of the community.

-  Counties included in the Great Rivers United Way Compass Now 2018 Report
-  Gundersen St. Joseph’s Hospital and Clinic locations
-  Gundersen St. Joseph’s Hospital and Clinics key service area.

A NOTE ON THE COVID-19 PANDEMIC

Introduction

2020 was a year that will go down in history due to the significant number of defining moments. A global pandemic, which changed the way we lived, increased social isolation, and crippled the economy took place against a backdrop of increasing political, racial, and social tension.

As a result, we feel it is necessary to provide additional commentary on how these issues may have affected responses to our survey and impacted our approach.

2020's effect on the development of the report

Due to social-distancing measures, and staff and committee members being involved in handling the public health emergency, some initiatives to improve the content of the report needed to be scaled back or abandoned altogether. These initiatives included tailored approaches to gathering feedback from identified and historically under-represented racial, ethnic and social communities found within the Great Rivers region through in-person measures. As a result, this is one of the shortcomings of this report.

How 2020 may have affected survey responses: Mental Health

The pandemic brought about many changes in the way we live our lives. Social-distancing prevented family and friends from connecting in person, children could not play with their friends, families were not able to visit with elderly relatives, and celebrations were canceled.

Even though many found creative ways to maintain a social connection using virtual means, those on the lower end of the economic spectrum could not afford the technology to participate. Nor could they use avenues that were previously open to them, such as libraries, to access online services.

Losing a social support structure can have many negative effects on an individual's mental health.

This is well-documented, and concern about the mental health impacts of the pandemic had been raised throughout the year. It is therefore not surprising that mental health needs rank highly in our findings.

Children in poverty

The rate of children in poverty as of 2018 was 21% in Vernon county and the trend is that this was worsening. In 2019, the rate of child abuse cases per 1,000 was 1.7. This was pre-pandemic. Concerns around the effect of schools being closed or operating on a reduced schedule, coupled with parents working from home or having lost their job were raised conversationally through our stakeholder meetings. Concerns around the "spike" in calls related to child abuse were also raised. Data on this subject may not be available for a few years. Our survey asked about concerns of child abuse in their community and 67% (RHS) and 50% (CS) responded that they are moderately or very concerned.

In conclusion

It's important to note that 2020 was highly polarizing. Some saw the pandemic as nothing more than an exaggerated flu season. Some choose to disregard social-distancing and mask-wearing while others declared it as the new normal. Some saw the racial tension as a long-overdue response to a system that doesn't represent them while others saw it as an excuse to be unlawful and violent. With it being an election year, almost every issue was reduced to red or blue. It is therefore important to note that the survey responses will reflect this in some way. Some may have answered the survey as if 2020 was a minor bump in the road, others may have responded as if this was our new normal and a turning point on many fronts. It is also highly likely that these points of view aligned with social, political, racial, and economic backgrounds.

KEY ISSUES | HEALTHY BEHAVIORS

WHAT THE DATA SHOWS

Below is a summary of key points from the data relating to Healthy Behaviors.

1 IN 3 ADULTS ARE OBESE

- County health rankings show that 32% (Vernon) and 36% (Juneau) of adults are obese. (BMI over 30)

LEADING CAUSES OF DEATH

- Heart disease and cancers are the leading causes of death in Vernon and Juneau counties.

SMOKING RATE REMAINS AT 17%

- 17% of the population of Vernon and Juneau counties self report that they currently smoke.

PHYSICAL INACTIVITY

- 18% (Vernon) and 25% (Juneau) of adults report no leisure-time physical activity.

ALCOHOL MISUSE

- 24% (Vernon) and 23% (Juneau) of adults report binge or heavy drinking.

WHAT OUR COMMUNITY SAID

A notably higher percentage of convenience sampling respondents (lower socio-economic, at risk demographics) reported fair to poor ratings for mental health.

Alcohol use, tobacco, vaping/e-cigarettes, drug misuse, suicide and mental health were high ranking concerns by the community.

KEY ISSUES | HEALTH CARE

WHAT THE DATA SHOWS

Below is a summary of key points from the data relating to Health Care.

11% UNINSURED RATE

- The estimated uninsured rate in Vernon County (11%) continues to be higher than others in the region. *It is unknown if the Amish community is included in the data.*

LARGE MENTAL HEALTH GAP

- The mental health treatment gap (The number of people who needed mental health care but could not get access) for Vernon County is 56% (adults) and 55% (youth)

COLON CANCER SCREENINGS LAG

- The colorectal cancer screening rate for Vernon county (76%) lags behind the region (78%) and the state (83%).

UNKNOWN BARRIERS TO CARE

- A large percentage of survey respondents responded "Other" when asked if there was a time in the last 12 months when they should have seen a doctor but didn't. *This warrants further investigation.*

MAMMOGRAMS AMONG SENIORS

- 44% of 65-74 yr old medicare enrollees received an annual mammogram screening. *This warrants further investigation.*

FLU VACCINATION RATE

- 35% of fee-for-service (FFS) Medicare enrollees that had an annual flu vaccination. *This warrants further investigation.*

WHAT OUR COMMUNITY SAID

Even though the uninsured rate for the county is at 11%, only 8% of our survey respondents and 5% of our convenience sampling respondents reported no one in their household having insurance.

Around 86% of survey respondents rated their access to healthcare good or excellent.

KEY ISSUES | SOCIO-ECONOMICS

WHAT THE DATA SHOWS

Below is a summary of key points from the data relating to Socio-economics.

1 IN 5 CHILDREN LIVE IN POVERTY

■ 21% (Vernon) and 18% (Juneau) of children live in poverty - a trend that is getting worse.

SINGLE-PARENT HOUSEHOLDS

■ 18% (Vernon) and 26% (Juneau) of children live in a household headed by single parent.

2 IN 5 HOUSEHOLDS ARE STRUGGLING

■ 39% (Vernon) and 37% (Juneau) of households are in poverty or categorized as ALICE (Asset Limited, Income Constrained, Employed)

WHAT OUR COMMUNITY SAID

The community responses show concerns related to the ability to access childcare, abuse of the elderly and sexual violence.

The community responses to economic concerns include the ability to pay for college, housing expenses, legal assistance and childcare.

Other notable concerns include risk of job loss, personal debt, poverty, transportation and the availability of livable wage jobs.

KEY ISSUES | PHYSICAL ENVIRONMENT

WHAT THE DATA SHOWS

Below is a summary of key points from the data relating to the Physical Environment.

HOUSING PROBLEMS

- 15% (Vernon) and 13% (Juneau) of households have at least 1 of 4 housing problems: overcrowding, high housing costs, lack of kitchen facilities, or lack of plumbing facilities.

LONG, LONELY COMMUTES

- 38% of Vernon county workers report a long commute, alone.

WHAT OUR COMMUNITY SAID

Overall, the community is regarded as safe.

The community responses show concern for disease outbreaks, well water safety, criminal activity and cyber security.

Many are not prepared for flooding or a loss of job.

NEEDS PRIORITIZED BY COMMUNITY FOCUS GROUP

- 1. Mental Health
- 2. Poverty/Livable Wages/Socioeconomic Disparities
- 3. Childcare
- 4. Safe & Affordable Housing
- 5. Mobility & Transportation Access

IMPLEMENTATION PLAN

The following implementation plan is a road-map of how Gundersen St. Joseph’s Hospital and Clinics proposes to address the needs of the communities highlighted in this document.

HEALTHY BEHAVIORS	HEALTH CARE	SOCIO-ECONOMICS	PHYSICAL ENVIRONMENT
Completion and development of walking trail.	Promotion of mammography screenings.	Promotion of financial assistance program.	Continue to collaborate with Vernon County to provide and promote well-water testing.
Vaping and tobacco cessation education programs at schools.	Continue with the opioid reduction program.	Involvement with the new Hillsboro Chamber of Commerce.	Continue to collaborate with Vernon County to provide and promote radon testing.
Revival of health fairs and strong bodies programming.	Increased education around colonoscopy in line with GHS.	Explore partnership and support programs related to childcare, transportation and financial planning.	
	Continued expansion and development of school-based behavioral health program.		
Re-establish our community health committee			
Continuous surveying to gain further insight into identified community needs including, barriers to care, economic stressors, environmental concerns and health behaviors.			

ADOPTION OF THIS COMMUNITY HEALTH NEEDS ASSESSMENT

The Gundersen St. Joseph's Board of Directors approved this 2022-2025 Community Health Needs Implementation Plan on March 24, 2022. The support, guidance and input from the Gundersen St. Joseph's Board of Directors is appreciated in the development of this document. Their dedication to the health of the community is greatly acknowledged.

2021 COMPASS NOW

NAVIGATING TOWARD STRONGER COMMUNITIES

How is your community faring?

Vernon County

Acknowledgments

COMPASS Now 2021 would like to acknowledge and offer much gratitude to the following people and organizations for their time, commitment and expertise in the creation of this report.

Other Thanks

Thank you to the residents of Buffalo, La Crosse, Monroe, Trempealeau, and Vernon counties in Wisconsin and Houston County in Minnesota for completing the Random Household Survey in July and August of 2020 and the Convenience Survey in October and November of 2020; your responses laid the foundation of the assessment.

Additionally, thank you to all of the key informants who gave interviews for lending your thoughts and voices to an otherwise quantitative process during November and December of 2020.

Finally, thank you to everyone that was able to attend and participate in the county Stakeholder meetings. Your assistance in identifying and prioritizing the top needs of the region and counties involved in this process will help drive positive change throughout the region and assist many area residents. The following is a list of organizations that participated in the Stakeholder meetings in the region and is not inclusive of all of the representatives from the organizations that participated in this process:

Introduction

Compass Now is a joint effort of Great Rivers United Way, area healthcare organizations, and county health departments to improve the quality of life for everyone in the community. This introductory section outlines the purpose and additional elements of the study framework. Section 2 of the report provides detailed analysis of community indicators and insights gathered for this study.

Purpose of the Study

This report is the latest in a series of Compass Now needs assessments and reports published since 1995. In response to these reports, Great Rivers United Way has focused its funding system to more closely reflect identified community needs. In addition, a wide array of community organizations have used report findings to shape their own priorities and support grant requests.

The purpose of this Compass Now 2021 report is to provide an updated assessment of community needs that can be used to inform community action strategies by stakeholders across the region. The Compass Now 2021 study is focused on communities within a six-county region including Buffalo, La Crosse, Monroe, Trempealeau, and Vernon counties in Wisconsin, and Houston County in Minnesota. Reports are available for the six-county region and for each county within the region. This report describes needs within Vernon County.

2020 Population Estimate

Buffalo	13,534
Houston	19,527
La Crosse	120,515
Monroe	46,889
Trempealeau	30,097
Vernon	31,029
Region	261,591

Exhibit 1.1 - The Study Region. Source: CHS analysis of population estimates published by ESRI. See Appendix A for details.

DONATE NOW

Adjusting to COVID-19

The Compass Now study described in this report was conducted during 2020, and consequently affected by disruptions caused by COVID-19. These disruptions required two primary adjustments to the study.

- One adjustment involved postponement of a planned set of community meetings. The original study plan envisioned a series of community meetings in 2020 to gather insight about needs and action ideas from local stakeholders. Because of social distancing requirements, the community meetings were postponed to 2021.
- A second adjustment involved the process for surveying community members. The original study plan was to conduct a random household survey with community members across the region, supplemented by a 'convenience survey' and set of interviews with community members who might be under-represented in the random household survey. The convenience survey and interviews would have been conducted in community settings convenient to the prospective respondents. As a result of COVID-19 restrictions, the convenience surveys had to be conducted electronically, and the group interviews with community members could not be conducted in public spaces. As a result, we expect that some community members who could have participated in a face-to-face meeting were not able to participate in an electronic format.

Study Methods and Data Sources

The study was conducted under the direction of Great Rivers United Way, with technical support from a contracted consultant (Community Health Solutions). The study was guided by a *Compass Now Steering Committee* comprised of stakeholders from public health, health care, and other community sectors. The Steering Committee members provided guidance on the study scope and methods, including the adjustments made in response to COVID-19. The Steering Committee members also provided liaisons to engage community organizations in promoting participation in the convenience survey conducted for the study.

The study methods included analysis of community indicators from various sources, and community insights provided by respondents to a random household survey and a supplemental convenience survey. The study methods are summarized below, with more details provided in [Appendix A](#).

Community Demographics

A community demographic profile can provide insight about the size and distribution of the population in terms of health-sensitive attributes such as age, sex/gender, race, ethnicity, and income. Community demographics were analyzed and mapped using data and software from ESRI, a commercial provider of community data.

County Health Rankings

[The County Health Rankings & Roadmaps program](#) is a collaboration between the [Robert Wood Johnson Foundation](#) and the [University of Wisconsin Population Health Institute](#). The goals of the program are to:

- Build awareness of the multiple factors that influence health.
- Provide a reliable, sustainable source of local data and evidence to communities to help them identify opportunities to improve their health.
- Engage and activate local leaders from many sectors in creating sustainable community change.
- Connect and empower community leaders working to improve health.

As illustrated in *Exhibit 1.2*, the County Health Rankings are based on a model of community health that emphasizes the many factors that influence how long and how well we live. The Rankings use more than 30 measures that help communities understand how healthy their residents are today (health outcomes) and what will impact their health in the future (health factors).

Additional Community Indicators

Indicators from the County Health Rankings are supplemented with additional indicators from sources in the local region. These supplemental indicators include:

- Leading causes of death
- Maternal and infant health indicators
- Prevalence of mental health conditions and treatment gaps
- Asset-Limited, Income-Constrained, Employed (ALICE) households
- Child services cases.

The indicators are provided in several sections of the report, along with notes on specific data sources.

Exhibit 1.2 - The County Health Rankings Model

Random Household Survey

A random household survey (RHS) of community residents was conducted in July-September of 2020. The survey was mailed to 6,000 randomly selected households using a sampling strategy designed to produce a target number of at least 100 survey responses from each of the six counties. In addition, within each county the mail-out was designed to over-sample from census tracts with relatively low income to help assure that lower-income community residents were represented. Great Rivers United Way staff and volunteers entered the survey data into a Qualtrics survey portal provided by Community Health Solutions.

Convenience Survey

A supplemental convenience survey (CS) was conducted in October-November 2020. The purpose of the CS was to generate additional survey responses from populations that may have been under-represented in the RHS. The CS was primarily conducted using mixed methods, and respondents could either complete their survey online or submit a paper copy of their survey response. Great Rivers United Way staff and volunteers entered paper survey responses into a Qualtrics survey portal provided by Community Health Solutions.

A profile of RHS and CS respondents from Vernon County is provided in *Exhibit 1.3*. As shown in the second column of the exhibit, a total of 116 RHS respondents returned their surveys, for a response rate of 12%. Compared to population estimates for Vernon County, the RHS responses included a higher percentage of older adults than the population as a whole, and skewed toward respondents self-identifying as female and of White race. The household income profile for RHS respondents was fairly representative of the population as a whole, with slightly more representation at \$15,00-\$49,999 income levels. These differences between the RHS respondents and the overall population should be considered when evaluating the survey results presented throughout the report.

Exhibit 1.3 also provides a profile of 57 Vernon County Residents who responded to the CS respondents. Compared to the RHS, the CS yielded higher proportional representation of adults 30+, females, and minority residents. The CS results are presented alongside the RHS results throughout the report to provide a multi-method profile of survey responses. The two surveys were not combined because they are based on two fundamentally different sampling strategies.

Exhibit 1.3 Profile of Community Survey Respondents from Vernon County

Indicator	Random Household Survey (RHS) Respondents	Convenience Survey (CS) Respondents	Regional Population Estimates
Total	116	57	23,637 (age 18+)

Limitations of this Report

This Compass Now 2021 report is intended to inform community action strategies by stakeholders across the region. The data presented within the report comes from multiple sources, each with its own set of limitations that should be considered when interpreting the results.

Scope of Community Indicators

Section 2 of the report provides a series of exhibits showing various community indicators along with community insights from survey responses. The report was not designed to include every possible indicator of community health and well-being, partly because some of the data sources tapped for the 2018 Compass Now report are no longer available. The report does present a core set of community indicators that can be helpful for planning community improvement strategies. We encourage readers to use this report as a starting point, and go beyond the report to seek additional data and information that can help you plan and implement effective strategies for community improvement. Some data indicators contained in prior reports were not available, updated or deemed valid for this report.

County Health Rankings

The County Health Rankings are developed from multiple data sources with varying levels of reliability, and some of these data sources are several years old. Consequently, the rankings and indicators do not provide precise and definitive evidence on where one county stands compared to another. However, in most cases the rankings and indicators are reliable enough to illustrate general community strengths and areas of concern, and they can be helpful for informing efforts to improve community health and well-being.

Random Household Survey

The RHS was randomized by mailing address in an effort to give every household in the region an equal chance of receiving and completing the survey. The survey mailout to 6,000 households was stratified by county to assure that every jurisdiction would be represented. Within each county the survey was designed to over-sample from census tracts with relatively low income so that this population could be represented as well. As outlined in *Exhibit 1.3*, the RHS responses were significantly skewed toward older residents, and skewed to a lesser extent toward whites and lower income households. Consequently, we cannot say that the survey results are exactly representative of each county and the region as a whole. As a general guide, it is reasonable to assume the percent estimates in the regional RHS results are probably accurate within a margin of error of plus or minus 5%. At the county level, it is reasonable to assume the results are probably accurate within a margin of error of plus or minus 10%.

Convenience Survey

The purpose of the CS was to generate additional survey responses from populations that may have been under-represented in the RHS. The CS was primarily conducted using mixed methods, and respondents could either complete their survey online or submit a paper copy of their survey response.

Because the CS was not randomized across the region, it cannot meet the same standards of statistical significance as the RHS. In considering the CS results, it will be helpful to know the results are significantly skewed toward adults under age 45 and women, and skewed to a lesser extent toward minority populations and middle-income households. As noted earlier, the CS results are presented alongside the RHS results throughout the report to provide a multi-method profile of survey responses. The two surveys were not combined because they are based on two fundamentally different sampling strategies.

Respondent Perceptions.

Both the RHS and CS asked respondents to share their insights about a wide range of factors at the individual, household, and community level. Many of the survey questions rely on respondent perceptions of community concerns and community supports. Perceptions are subjective and based on the unique experience of each individual respondent. A respondent's perception of a community issue reflects their reality, but might not reflect the actual situation in the community.

Bridging the Compass Now 2018 and 2021 Reports

The Compass Now 2021 study and report were framed and designed to provide continuity with the 2018 Compass Now Report where it was feasible and advisable to do so. For example, the main topics in Section 2 (Length and Quality of Life, Health Behaviors, etc.) reflect the main topics in the 2018 Compass Now report with a few minor exceptions. The designs for the 2020 RHS and CS were also crafted to reflect the 2018 approach, with some adjustments for sampling and refinement of survey questions. And like the 2018 report, Compass Now 2021 relies heavily on the County Health Rankings from the University of Wisconsin-Madison Population Health Institute. However, some of the community data sources used in 2018 were not available in a usable format for the 2021 report.

Although there is general continuity of structure between the 2018 and 2021 reports, caution should be used when comparing the results. One consideration is most of the community indicators in the 2021 report are several years old, and the same was true for the 2018 report. This problem of 'data lag' is a challenge not only for the Compass Now study series, but also for every community needs assessment that relies on secondary sources of data. Consequently, it is not possible to measure improvement on community indicators from 2018 to 2021 in a relevant and reliable way.

Another methodological consideration is the degree of comparability between the random household survey results from the 2018 and 2021 reports. One consideration is the 2018 and 2021 survey results were generated by two different survey populations that likely had some overlap but cannot be reliably compared. A second consideration is that much has changed in the community environment since 2018, including but not limited to the effects of the pandemic. As general guidance, it is best to view the survey results from 2018 and 2021 as two snapshots of different populations within the same communities.

As a final consideration, this report is not intended as a scorecard on the relative health and well-being of one county compared to another. Throughout the report we provide county-level indicators on a number of community issues. However, these indicators are not structured to support reliable comparisons between counties. To illustrate this point, although the County Health Rankings do provide a relative ordering of counties on various indicators, in many cases the differences in ranking are not based on statistically significant differences in the underlying data used to generate the rankings. Beyond statistics, each county has its own unique set of factors that influence the health and well-being of the population. We recommend focusing on how to sustain strengths and address challenges within each county rather than comparing counties in scorecard fashion.

How is Vernon County Faring?

This section summarizes data on how Vernon County region is faring today. The data include community health indicators from various sources, and community insights from the random household survey (RHS) and the convenience survey (CS).

The Six-County Region

The six-county region is diverse in terms of population size, selected demographic indicators, and overall health rankings. This section provides a demographic overview of the region and a summary of County Health Rankings for the region.

Demographic Profile

As shown in *Exhibit 2.1*, the six-county region is home to an estimated 261,591 residents. Within the Vernon County (VE) population an estimated 24% are children age 0-17, and an estimated 21% are adults age 65+. About four percent of the population is classified as minority, and about 23% of households have annual income below \$25,000.

Exhibit 2.2 provides a closer look at the Vernon County population by age. Within the county population of 31,029 there are an estimated 7,468 children age 0-17, and 6,402 adults age 65+. Looking ahead to 2025, overall population growth for Vernon County is projected to be 2%, with the most substantial growth (18%) projected for the older-adult population.

Summary of County Health Rankings

Exhibit 2.9 provides a profile of the [County Health Rankings](#) for Vernon County (VE) and the rest of the six-county region. Within the exhibit, the Wisconsin counties are ranked among all 72 counties in the state. The top half of the exhibit shows where each county ranks on the indicators shown. Green shading indicates a ranking in the 1st (best) quartile, with blue, yellow, and red shading indicating the 2nd, 3rd, and 4th quartile. The bottom part of the exhibit shows trends for the six counties.

As shown in the upper part of the exhibit, Vernon County ranks in the 1st or 2nd quartile on measures of health outcomes, length of life, quality of life, health behaviors and social & economic factors. Vernon County ranks in the 3rd or 4th quartile on measures of health factors, clinical care, and physical environment. The rankings and trends are explored in more detail in the following pages.

Length and Quality of Life

Measures of **length of life** in a community indicate whether people are dying too early and prompts exploration to look at what's driving premature deaths. Measures of **quality of life** indicate how people feel about their health and well-being at a given point in time. This section describes selected community indicators and community insights about length and quality of life.

Community Indicators

Community indicators presented below include County Health Rankings, leading causes of death, and maternal and infant health indicators.

County Health Rankings. Exhibit 2.10 shows the County Health Rankings for length and quality of life. As shown, Vernon County ranks in the first quartile on the length of life measure, and the second quartile for quality of life. The length and quality of life rankings are based on the indicators shown in the exhibit. Focusing on trends, Vernon County is improving on the premature death measure.

Leading Causes of Death. To further explore **mortality** in the region, *Exhibit 2.11* shows the leading causes of death as of 2018. As shown, heart disease and malignant neoplasms were the leading causes of death in Vernon County. Other leading causes were chronic lower respiratory diseases, cerebrovascular diseases, Alzheimer's Disease and accidents (unintentional injuries).

Maternal and Infant Health. Maternal and infant health measures can also provide insight about community quality of life. As shown in *Exhibit 2.12*, there were 401 births in Vernon County in 2018. Of these, 25 (6%) were low-weight births, compared to 8% for Wisconsin as a whole. There were less than five infant deaths in Vernon County during 2018; with a lower rate than Wisconsin as a whole. It is important to note that infant deaths can fluctuate significantly, and one year of data is insufficient to support definitive conclusions about infant mortality rates.

Community Insights

Community survey respondents were invited to rate various aspects of community life. These ratings can provide insights about the quality of community life in its various dimensions.

Ratings of Community Life. *Exhibit 2.13* shows ratings of selected aspects of community life on a scale from poor to excellent. The most positive ratings (good or excellent) were provided for Vernon County as a place to live, and for opportunities to volunteer in the community. (As additional context, 56% of RHS respondents and 61% of CS respondents reported they or family members volunteer). The most negative ratings (poor or fair) were for the community as a place where all people are treated respectfully, and a place where people of different cultural/racial/ethnic backgrounds are included in decision making.

Exhibit 2.13 Ratings of Community Life in Vernon County

Topic/Survey	Poor	Fair	Good	Excellent	No Opinion	Total
a. Rating of your community as a place to live						
RHS	0%	9%	61%	29%	N/A	116
CS	2%	18%	51%	30%	N/A	57
b. Your community as a place that meets your family's recreational needs (Fine arts, outdoor activities, etc.)						
RHS	6%	26%	44%	19%	5%	112
CS	7%	35%	40%	16%	2%	57
c. Opportunities for youth to explore interests and participate in positive activities.

Community Insights

Community survey respondents were asked to rate their personal health and identify concerns about health issues in the community.

Ratings of Personal Health. *Exhibit 2.17* shows that among RHS respondents from Vernon County, 21% rated their personal health as fair or poor, 15% rated their overall mental health as fair or poor, and 24% rated their overall dental health as fair or poor. CS respondents had a notably higher percentage of fair or poor ratings for mental health.

Cancer Screening Rates. *Exhibit 2.20* shows selected cancer screening rates for each county within the region. Screening rates in Vernon County ranged from 76%-86%. Vernon County had lower screening rates for breast cancer and colorectal cancer than Region Total and Wisconsin for colorectal cancer screening.

Screening rate definitions follow:

- **Breast Cancer:** The percentage of women aged 50-74, who receive primary care from a Wisconsin Collaborative for Healthcare Quality (WCHQ) member health system and had a minimum of one breast cancer screening test during the two-year measurement period.
- **Cervical Cancer Measure:** The percentage of adults aged 21-29 who had a minimum of one cervical cancer screening (cytology) test during the 3-year measurement period; and aged 30-64 who had a minimum of one cytology test during the 2-year measurement period or one screening cytology test and an HPV test within the last 5 years.
- **Colorectal Cancer Measure:** The percentage of adults aged 50-75, who receive primary care from a WCHQ member health system and received a screening for colorectal cancer. This could include a colonoscopy in the past ten years, a CT colonography or flexible sigmoidoscopy in the past five years, or a stool test within the last year.

Mental Health Care. Selected mental health indicators are shown in *Exhibit 2.21*. Focusing on estimates for adults in Vernon County, more than 4,167 individuals experienced a mental illness in 2017. Of these, 1,862 received mental health services, while more than 2,300 (56%) did not receive services. Among children and youth in Vernon County, 1,222 experienced a mental illness in 2017. Of these, nearly 548 received treatment, but 674 (55%) did not receive services.

Community Insights

Self-Reported Health Coverage. Survey respondents were asked to provide information on health coverage for their household. As shown in *Exhibit 2.22*, more 92% of survey respondents from Vernon County reported all members of their household have health coverage. Among RHS respondents, the leading types of health coverage were Medicare, employer-based insurance, and private insurance. Among CS respondents, the majority reported employer-based insurance, followed by Medicare, and Medicaid.

Exhibit 2.22 Self-Reported Health Coverage in Vernon County

Do all members of your household have health coverage?

Ratings of Health Care Access and Affordability. Survey respondents were asked to rate their ability to access and afford health services including healthcare, mental health care, and dental care. As shown in *Exhibit 2.23*, the large majority of survey respondents from Vernon County rated their access and ability to afford services as good to excellent. However, sizable percentages reported poor or fair ratings for access and affordability. Focusing on the RHS results, the percent of respondents reporting poor or fair ability to pay for services was 28% for healthcare, 32% for mental health care, and 30% for dental care. For CS respondents the percent reporting poor or fair ability to pay for services was 35% for healthcare, 40% for mental health care, and 37% for dental care.

Community Indicators

Community indicators presented below include County Health Rankings, low-income households, and child services cases.

County Health Rankings. Exhibit 2.27 shows the County Health Rankings for social and economic factors. As shown, Vernon County ranks in the second quartile statewide. Focusing on selected trends, an increase in the child poverty rate is indicated for Vernon County. In considering these indicators it is important to note the social and economic indicators shown do not reflect the disruptions caused by COVID-19 in 2020.

Low-Income Households. Household income is a fundamental indicator of health opportunity. As shown in *Exhibit 2.28*, in 2018 there were an estimated 1,812 households in Vernon County with income at or below poverty. Another important indicator is the number of ALICE households. ALICE® is an acronym for Asset Limited, Income Constrained, Employed, and provides a new way of defining and understanding the struggles of households that earn above the Federal Poverty Level, but not enough to afford basic necessities. In 2018, there were an estimated 2,899 households in the region that could be classified as meeting the ALICE criteria.

Community Insights

Caring for Vulnerable Persons. Survey respondents were asked if they care for individuals who are aging or have a disability, and to share their insights about community supports for these vulnerable populations. As shown in *Exhibit 2.30*, 23% of RHS respondents from Vernon County reported they care for an individual that is aging, and 18% reported they help care for an individual with a disability. For CS respondents, 23% help care for an individual that is aging, and 23% help care for an individual with a disability.

Exhibit 2.30 Caring for Vulnerable Persons in Vernon County

Concerns about Meeting Household Needs. Survey respondents were asked to rate their concerns about meeting household needs related to food, housing, clothing, taxes, utilities, childcare, and legal assistance. As shown in *Exhibit 2.33*, the majority of respondents from Vernon County reported no concern or little concern about meeting basic household needs. Focusing on RHS respondents, the percentage reporting being moderately or very concerned ranged from about 9% to 20% across the factors listed. The percent of CS respondents who are moderately or very concerned ranged higher, from 13% to 44% across the factors listed. The highest level of concern among CS respondents was ability to pay for education beyond high school.

Physical Environment and Safety

Physical environment and community safety affect length and quality of life. The physical environment includes the spaces where individuals live, learn, work, and play. People interact with their physical environment through the air they breathe, water they drink, houses they live in, and the transportation they access to travel to work and school. This section describes selected community indicators and community insights about the physical environment and safety in the region.

Community Insight on Priority Needs and Ideas for Solutions

Sections 1 and 2 of this report provide a comprehensive analysis of community needs based on community indicators and community survey responses. This section provides supplemental insight based on a meeting with community stakeholders and a follow-up survey on priority needs.

Meeting with Community Stakeholders

Great Rivers United Way collaborated with local partners to organize a series of virtual meetings with community stakeholders from each of the six counties in the study region. The purpose of the meetings was to gather additional insight about priority needs and action ideas from a local perspective.

The community stakeholder meeting with Vernon County was held on February 8, 2021. The invited participants included representatives from local business, education, government, health and human services, nonprofit and law enforcement agencies. A total of 25 individuals participated in the meeting. The meeting was facilitated virtually so that participants could attend while maintaining social distancing for the pandemic.

- Prior to the meeting, each participant was provided with a draft copy of the Introduction and Sections 1 and 2 of this report.
- During the meeting, participants were invited to share their insights about pressing community needs as viewed from their perspective.
- The meeting participants were also invited to complete a post-meeting survey to prioritize among the areas of need identified at the meeting event.

The results of the meeting and follow-up survey are summarized below. In reviewing the results, please note they are only a starting point for identifying priority needs and creative solutions. In the coming months, community stakeholders from Vernon County can continue to identify needs and develop solutions based on additional insights from community members.

Priority Needs Identified by Community Stakeholders (Vernon County)

Exhibit 3.1 provides a summary of priority needs identified by Vernon County Community Stakeholders. The first column shows pressing areas of need identified by the participants during the meeting event. The second column shows the priority rankings of need based on results from a follow-up survey of meeting participants.

Exhibit 3.1 Priority Needs Identified by Vernon County Community Stakeholders

- | | |
|--|---------------------------------|
| 1. Mental Health | 7. Health Information Education |
| 2. Poverty / Livable Wages / Socioeconomic Disparities | 8. Overall Access to Care |
| 3. Childcare | 9. Emergency Response |
| 4. Safe & Affordable Housing | 10. Vaccine Hesitancy |
| 5. Mobility & Transportation Access | 11. Safe Drinking Water |
| 6. Overall Ability to Pay for Care | 12. Civil Unrest |

Source: The 25 participants in the community stakeholder meeting were invited to prioritize the areas of need identified during the meeting via a post-meeting survey. Nine participants responded. Items are ranked 1-12 based on the mean priority score for each area of need.

As shown in **Exhibit 3.1**, the list includes needs related to mental health, access to health care, social and economic factors, quality of life, and physical environment and safety. These issues are reflected in the community indicators and survey results presented in **Section 2** of the report. We encourage community stakeholders to review **Section 2** for additional insight and context on the issues.

Ideas for Solutions Submitted by Community Stakeholders

As part of the follow-up survey participants were invited to share ideas for solutions to the top community needs identified at the stakeholder meeting. Seven participants responded with eleven ideas as listed in *Exhibit 3.2*. The results reflect the connections between access to health care, socio-economic challenges, and community development. Also, each of the ideas listed would require creative collaboration across organizations and sectors.

Exhibit 3.2 Ideas for Solutions Submitted by Vernon County Community Stakeholders

- Increased access/providers for Behavioral Health.
- Education on reducing the stigma of receiving Behavioral Health services.
- Find ways to bring mental health providers to our community who are willing to accept patients with Badger Care or Medicaid.
- Are villages/towns able to offer some start up assistance for daycare centers or offer grants or support for those running in home daycares to enhance their opportunities?
- Also encourage and support the development of mixed income housing development.
- Advocate for livable wages.
- I feel that at the heart of everything we struggle with is the family unit. There are families that are flourishing and there are families who are struggling. The families who are struggling have a lower socio-economic status, lower paying jobs, struggling with understanding how to manage life, debt, healthcare, childcare, money, etc.
- County, cities, villages to make it easier for business to come to Vernon County. Available jobs will help deal with some of the other issues.
- Attract and retain new business to bring more jobs to the rural regions of the county.
- Strong Local Economic Development Programs and Initiatives.
- Partnerships with local stakeholders.

Note: The 25 participants in the community stakeholder meeting were invited to respond to this item in their own words. There were seven responses with eleven ideas as listed above.
